SUMMARY

AI Engineer with production ML experience across computer vision, NLP, and semantic search — designed and shipped a full end-to-end pipeline from raw data ingestion through vector retrieval and LLM reasoning. Five years in wireless telecom at Ultra Mobile (Mint Mobile) with hands-on understanding of the subscriber lifecycle, promotional campaign performance, and customer conversion metrics that drive wireless retail decisions. Applies the same data rigor that powered e-commerce systems serving millions of subscribers to building AI models that work in the real world.

TECHNICAL SKILLS

AI / ML: CLIP (multimodal embeddings), YOLO (object detection), Ollama / LLaMA 3.2, LangChain, RAGAS (evaluation), Transformer architectures, NLP, computer vision

Languages: Python, JavaScript / TypeScript, SQL, PHP

Frameworks: FastAPI, Celery, Next.js, React

Databases: PostgreSQL, Qdrant (vector DB), Redis

MLOps: Docker, GitHub Actions CI/CD, Nginx, Hetzner Cloud, AWS Lambda / API Gateway

Data & APIs: REST APIs, WebSockets, OpenAI API, Pandas, NumPy

Testing & Evaluation: RAGAS (faithfulness, answer relevancy, context precision/recall), Cypress E2E, Optimizely A/B

PROJECTS

Lumen — Semantic Media Search Pipeline

github.com/odanree/semantic-media-pipeline | lumen.danhle.net

- Built a full AI pipeline: CLIP multimodal embeddings generate vector representations for 500GB+ of unstructured media (video, images, audio) ingested into Qdrant vector DB; Ollama LLaMA 3.2 reasons over retrieved frames to answer natural-language queries
- Implemented YOLO object detection for automated visual enrichment and an audio processing layer for speech detection and segment classification — covering all three modalities (text, image, voice)
- Deployed RAGAS evaluation harness with GitHub Actions CI/CD gate; pipeline fails build if faithfulness or answer relevancy metrics drop below defined thresholds
- Achieved sub-second search latency on CPU-only ARM cloud server; optimized Qdrant payload indexes for 10,500x filtering speedup on 1.88M vectors
- MLOps: Docker Compose, automated deployment pipeline, Nginx reverse proxy, Hetzner Cloud VPS

LLM Local Assistant — VS Code Extension (v2.13.1)

- Shipped production VS Code extension with AI-powered code analysis; built intelligent safeguards for AI-generated file modifications
- Designed and implemented multi-model routing strategy for different analysis tasks

AI Chatbot

- Dual-personality chatbot using Strategy Pattern; demonstrates prompt engineering and LLM integration fundamentals

EXPERIENCE

Software Engineer 2

May 2022 – Jan 2026

Ultra Mobile (Mint Mobile) · Costa Mesa, CA

- Built and maintained e-commerce systems serving millions of wireless subscribers on Mint Mobile and Ultra Mobile platforms — deep familiarity with wireless retail KPIs, subscriber acquisition, and churn dynamics

- Identified a JavaScript compatibility bug using Google Analytics funnel analysis; quantified \$10,000/month revenue impact from conversion drop-off data to prioritize the fix with stakeholders
- Built Promotions Manager — configurable rules engine that cut campaign deployment from 3 sprints to 1 and enabled marketing to self-serve promotions year-round without engineering involvement
- Ran A/B tests (Optimizely) on checkout flows and promotional experiences; used conversion data and revenue analysis to drive product decisions
- Designed custom CMS architecture enabling non-technical teams to manage content independently; reduced mid-sprint engineering interruptions from legal and marketing

UX Developer

Jan 2020 – May 2022

Ultra Mobile · Costa Mesa, CA

- Introduced Storybook component library; established component isolation standard that reduced UI regressions and shortened code review cycles across the team
- Built responsive subscriber acquisition landing pages and promotional experiences for Mint Mobile campaigns, including Ryan Reynolds celebrity marketing partnerships

Lead Front-end Developer

Jan 2018 – Jan 2019

Mobovida, LLC

- Led front-end development for wireless accessories e-commerce platform with large SKU catalog
- Mentored junior developers on coding standards and architecture best practices

Lead Web Developer

Aug 2017 – Jan 2018

OneClickSolar.com

- Achieved sub-2-second page load performance for solar e-commerce platform through systematic performance optimization

Intermediate Programmer

Dec 2016 – Jul 2017

Rebar Interactive

- Delivered client-facing web applications in a digital agency environment across multiple simultaneous accounts

System Administrator

Nov 2013 – Jul 2016

e4Hats.com

- Managed infrastructure for e-commerce operation; reduced system downtime by 80% through proactive monitoring and process improvements

EDUCATION

LearningFuze Development Bootcamp · 2016
