SUMMARY

Frontend Engineer with 9+ years of production React and TypeScript experience — building component systems, shipping high-performance interfaces, and owning outcomes across the full stack. Introduced and scaled Storybook component libraries that reduced regressions and raised team velocity. Built a semantic file search engine using vector embeddings and in-browser streaming media previews — the same architecture Files.com is building next. Comfortable in any layer: UI systems, backend APIs, CI/CD pipelines, and open-source tools that ship to real users.

TECHNICAL SKILLS

Frontend: React, TypeScript, Next.js (SSR, ISR, Edge Middleware), JavaScript ES6+, Storybook, Atomic Design, CSS-in-JS, responsive / accessible UI

Testing: Cypress E2E, Jest, unit & integration testing, Optimizely A/B, RAGAS evaluation (AI pipelines)

CI/CD & DevOps: GitHub Actions, Bitbucket Pipelines, Jenkins, Docker, Nginx, Vercel-compatible deployment, AWS Lambda / API Gateway

Backend & APIs: Node.js, FastAPI (Python), PHP, RESTful APIs, WebSockets, PostgreSQL, Redis

AI / ML: CLIP (multimodal embeddings), Qdrant (vector DB), Ollama / LLaMA, LangChain, YOLO object detection

Open Source: VS Code extension (marketplace), public GitHub repos with CI/CD-gated quality checks

PROJECTS

Lumen — Semantic File Search Engine (Production) github.com/odanree/semantic-media-pipeline | lumen.danhle.net

- Built a full-stack semantic search platform: CLIP vector embeddings index 500GB+ of files (video, image, audio) into Qdrant; LLaMA 3.2 reasons over retrieved results to answer natural-language queries — the same pattern as Files.com's upcoming AI-Powered Content Discovery feature
- Engineered in-browser streaming media previews via WebSocket connection between Next.js frontend and FastAPI backend — sub-second time to first frame
- Built a metadata extraction pipeline that normalizes structured data across three file modalities (video, image, audio) at scale
- Next.js frontend with real-time result streaming, similarity search panel, and filter UI backed by Qdrant payload indexes (10,500x speedup on 1.88M vectors)
- MLOps: GitHub Actions CI/CD with RAGAS quality gate, Docker Compose, Nginx reverse proxy

Headless WordPress + Next.js — Production Implementation

- Built headless CMS architecture with Next.js Edge Middleware authentication and Incremental Static Regeneration for dynamic content with static-site performance
- Designed reusable component system and GraphQL data layer connecting Next.js frontend to WordPress backend API

Shopify Headless E-commerce — 100/100 Lighthouse

- Custom Stripe payment engine with webhook integration and idempotency-based ghost order prevention; achieved perfect Lighthouse scores across performance, accessibility, best practices, and SEO

LLM Local Assistant — VS Code Extension (v2.13.1, Open Source)

- Shipped production VS Code extension with AI-powered code analysis and intelligent safeguards for AI-generated file modifications; designed multi-model routing strategy for different task types

EXPERIENCE

Software Engineer 2

May 2022 – Jan 2026

Ultra Mobile (Mint Mobile) · Costa Mesa, CA

- Built and maintained React / TypeScript e-commerce interfaces serving millions of subscribers — checkout flows, plan selection, promotional campaign experiences, and account management
- Designed and shipped the Promotions Manager — configurable rules engine with React admin UI that cut promotional campaign deployment from 3 sprints to 1; marketing self-served without engineering involvement
- Ran A/B tests (Optimizely) on checkout flows and conversion funnels; used analytics data to prioritize a JavaScript fix that recovered \$10,000/month in lost conversions
- Designed custom CMS architecture (ACF field groups) to decouple content management from code deployments, enabling non-technical teams to ship independently
- Participated in code reviews, architecture discussions, and sprint planning across a cross-functional team of engineers, designers, and product managers

UX Developer

Jan 2020 – May 2022

Ultra Mobile · Costa Mesa, CA

- Introduced and built out Storybook component library from scratch — established component isolation standard across the team; code reviews anchored to "does this match the Storybook story" reduced regressions and shortened review cycles
- Built responsive promotional landing pages and subscriber acquisition experiences for Mint Mobile campaigns at scale

Lead Front-end Developer

Jan 2018 – Jan 2019

Mobovida, LLC

- Led frontend development for wireless accessories e-commerce platform; mentored junior developers on component architecture and coding standards

Lead Web Developer

Aug 2017 – Jan 2018

OneClickSolar.com

- Achieved sub-2-second page load performance for solar e-commerce platform; reduced load times by 99.9%

Intermediate Programmer

Dec 2016 – Jul 2017

Rebar Interactive

- Delivered client-facing web applications in a digital agency environment across multiple simultaneous accounts

System Administrator

Nov 2013 – Jul 2016

e4Hats.com

- Managed infrastructure for e-commerce operation; reduced system downtime by 80%

EDUCATION

LearningFuze Development Bootcamp · 2016
